

SnapNrack Channel Nut Product Update

SnapNrack is updating its product portfolio to further simplify our product offering and provide the best value to our customers. Historically we have offered 2 different channel nut options for our customers.

- 232-02005 - Original Channel Nut (without bonding pins)
- 232-02009 - Bonding Channel Nut

Moving forward SnapNrack will only be offering the 232-02005 Original Channel Nut in efforts to further simplify our product portfolio. The purpose of the standalone channel nuts are to provide users the ability to attach additional mounts and/or accessories to SnapNrack's proprietary rail profile. In such instances the requirement for bonding through the rail is not necessary, and the 232-02005 will fully satisfy such needs. On components and assemblies where bonding through the rail is required, SnapNrack's fully pre-configured assemblies will continue to be manufactured with the bonded version of our channel nut. If you were ordering Part Number 232-02009 in the past you will now need to order Part Number 232-02005.

If you have any questions about this change please contact the SnapNrack Applications Engineering Team at appeng@snapnrack.com or by calling 877- 732- 2860.
