

AESTHETICS MATTER WITH SNAPNRACK

Appealing Design With Built-In Aesthetics

The SnapNrack Solar Mounting Solutions is a line of solar racking specifically designed to reduce your installation time and cost. The SnapNrack system incorporates major technical and production advances to simplify and reduce the cost of solar installations. The innovative system design excels in enhanced aesthetics by featuring flat edge rails and using universal end clamps that leave a flush cut edge on the array. Contrary to the competition skirts available that require additional parts, SnapNrack's enhanced aesthetics are built-in to the design without requiring additional components and hardware.

SnapNrack Simplified

- SnapNrack was developed in the field by a team of veteran solar engineers and installers to drive down overall installation costs.
- SnapNrack produces innovative feature-rich mounting solutions that are designed to reduce installation and life cycle costs of PV installations. Features include:
 - Snap in hardware
 - Single tool installation
 - No cutting or drilling
 - Preassembled hardware
 - Easy leveling

SnapNrack™
Solar Mounting Solutions

Simple

SnapNrack rails feature a flat edge that always leaves a polished clean finish. Unlike competitor's array skirts, a clean polished look is achieved from the rail's design without installing additional parts. The rail channels incorporate built in wire management to hide any electrical wires. The rail sizes, 122" and 162", are designed to hold 3 or 4 modules and leave a square edge, without any required cutting. The ends of the rails are finished with a matching end cap that helps create a smooth, clean line finish on the system.

Innovative

The Universal End Clamp (UEC) is a unique one-size-fits-all clamp that slips inside the module frame, completely out of sight. Since the UEC locks onto the module frame from the underneath, the rails are able to be cut flush with the modules.

Adaptable

SnapNrack features accessories that further enhance the design aesthetics. For instance, the Edge Screen Protector guards against critters and debris without damaging the array or reducing production. Installation is a tool less process that can retrofit to any existing array.
